Why You Need *iVerify*

- Do you have a product that you produce or sell that other people are faking and counterfeiting?
- Do you produce or issue documents that other people are faking?
- Do you have an idea for a new product but you are afraid of other people undermining your business with fakes and counterfeits?

iVerify is the answer!

- Tag your products or documents with secure encrypted codes.
- Anyone, at anytime or anywhere, can easily verify the originality or authenticity of your product or document with a free mobile application.

How To Protect Your Product

You print the secure encrypted codes on your product packages or you obtain the secure encrypted codes and affix them on your products or documents. These codes are distinctive (red in color) for easy identification on a product or document.

When a person needs to buy your product or accept your document, he/she first looks for the code. If the red code is not available, then it's a fake or counterfeit. If the red code is available, he/she uses the free Mobile App (*iVerify 2D Code*) to scan the code. If the scan was unsuccessful, then it's a fake or counterfeit, otherwise, it's an original. The Mobile App also allows the individual to register the product or document.

Anyone can easily verify the originality or authenticity of any of your products or documents.

Your products are protected from faking or counterfeiting because the secure codes that you affix or print on your products can not be compromised - no one else can generate them, only you can; and only *iVerify 2D Codes* can decode them! If someone tried to scan the red codes with any other program, they will get unintelligible or unrecognizable result.

How To Verify a Product

If you're a consumer and you need to verify the originality or authenticity of a product or document that is protected by *iVerify*, then do the following:

If you haven't installed the *iVerify* Mobile App on your smartphone, then download and install it on your smartphone - it's a free Mobile App.

1. Look for the red code (like any of the codes on the left-side of this page). If you don't find the code then the item is a fake or counterfeit.
2. If you found the code, then use the *iVerify* App on your phone to scan the code. If the App displays an error message, then the item is a fake or counterfeit. If the scanning was successful, the App displays some information which may include the owner of the product and a description of the product. Additionally, a "Continue" button may be displayed which when clicked, it will provide additional useful information about the product, including an option for you to register that particular item.
